Research abstract, v1, first edition

by

Fujimiya Amane

Abstract: This is a template for all RHINELAB-RINALAB **research abstract** provided for *preliminary drafting* and *short-form idea crafting* only (for reference, it will look like those Call for Papers that ask for abstract).

This is **version 1** of the template. Rather would there not be a lot of changes, but just so happens, then here.

Keywords: Keyword1, Keyword2, Keyword3

1 Specification

Provide specification details, metaprogramming.

1.1 Document code, priority

Provide document codes, additional document code, purpose, organization, authorship and anyone contributing to the report, identification of purpose (proposal, or research, indexing 01). Priority code, additional conditions. Does it override anything, or add to anything?

1.2 Body of issue

Who issue, team or departmental attachment.

1.3 Date and Version

Version specification across versions, and similarly date of construction. **Do not remove old dates**, for versioning record.

2 Introduction

What is the topic of the short-form research abstract? Expanded name if able[1].

2.1 Topics

Layout relevant topics. If the topic is with organization codes (for example, AMS Mathematics field specification code, or Physics catalogue), please specify. Otherwise, proceed with your own categorization.

2.2 Additional topic consideration

What is the aim or short purpose to those fields, and other short considerations?

3 Abstract details

Here is the main abtract

3.1 Foundational knowledge

List your preliminary foundational knowledge required or wanted to write.

3.2 Target of research

What is your target for research? Brief discussion and

[1] This is because most of the time the name of the main document up in the title, will be shortened. This is in procession to hold the full title name before truncation.

A An appendix

Appendix to more information. Analysis, cost process, etc.

B Another appendix

Subsectioning in appendix

Some more text, and a list:

1. First item in a list
2. Second item in a list
3. Third item in a list
4. Fourth item in a list
5. Fifth item in a list

C Citations

Items that are cited: *The LaTeX Companion* book [GMS93] together with Einstein's journal paper [Ein05] and Dirac's book [Dir81]—which are physics-related items. Next, citing two of Knuth's books: *Fundamental Algorithms* [Knu73] and *The Art of Computer Programming* [Knu].

Remember to change this to your respective bibliography. Usually, the file that holds the bibliography in the path is `bibb.bib`, so beware of that. The below part where there is `printbibliography` does it work - it prints the bibliography. Cite them using the `cite` key seen in the above citation.
